

# Connect your employees to health support at home

As a value-added service from your health plan partner, the Wellframe app helps employees better navigate the health system, meets employees where they are, and supports the whole person to get better cost and health outcomes. As a result, your organization can improve employee engagement, increase benefits utilization, achieve cost savings, and improve employee satisfaction.

## Help employees navigate the health system

The free app connects employees to a real person who can help with health support, direct employees into care management, and connect employees to providers. It serves as a single resource for employees to address their benefits and needs, including scheduling appointments, getting financial and administrative questions answered, getting support for chronic conditions, or guidance following a hospital discharge.

## Meet employees where they are

Wellframe combines technology and services to reimagine care for your employees. The patented platform delivers convenient health guidance through employees' preferred communication channels, including direct messaging, video chat, email and phone calls. Through personalized support and adaptable health programs, employees build trusting long-term relationships with their care teams, made up of nurses and healthcare professionals who are dedicated to helping them meet their health goals and feel their best.

## Support the whole person to get better cost and health outcomes

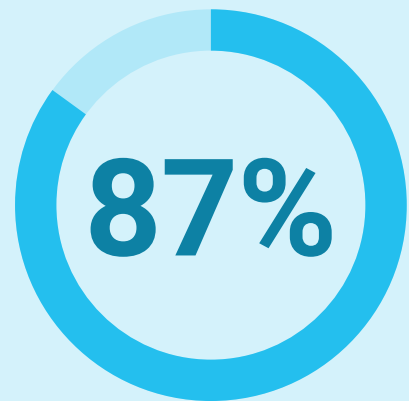

70+ interactive and personalized care and navigation programs support the holistic needs of employees, all in one place. Care managers can deliver personalized clinical programs to employees, help employees meet their goals for a healthy lifestyle, as well as provide behavioral health support alongside condition-related guidance. Employers will also receive configurable reports with analysis, metrics and insights that help you better forecast what your employees need and drive better utilization.

“Knowing there is a support system in place has kept me motivated. I know I am not alone on my journey.”
